

POULTEC BELL DRINKER

An economical and flexible solution for drinking water delivery in poultry farms

POULTEC BELL DRINKER is manufactured with top quality materials providing an excellent resistance to shocks and chemicals.

The drinker features make it suitable for broilers, layers and breeders farms.

The valve design offers excellent results in terms of durability maintenance and trouble free operation.

Each drinker houses inside the bell a sediment bottle which aids in stabilizing the drinker and minimizing the swinging and eliminates any water spillage.

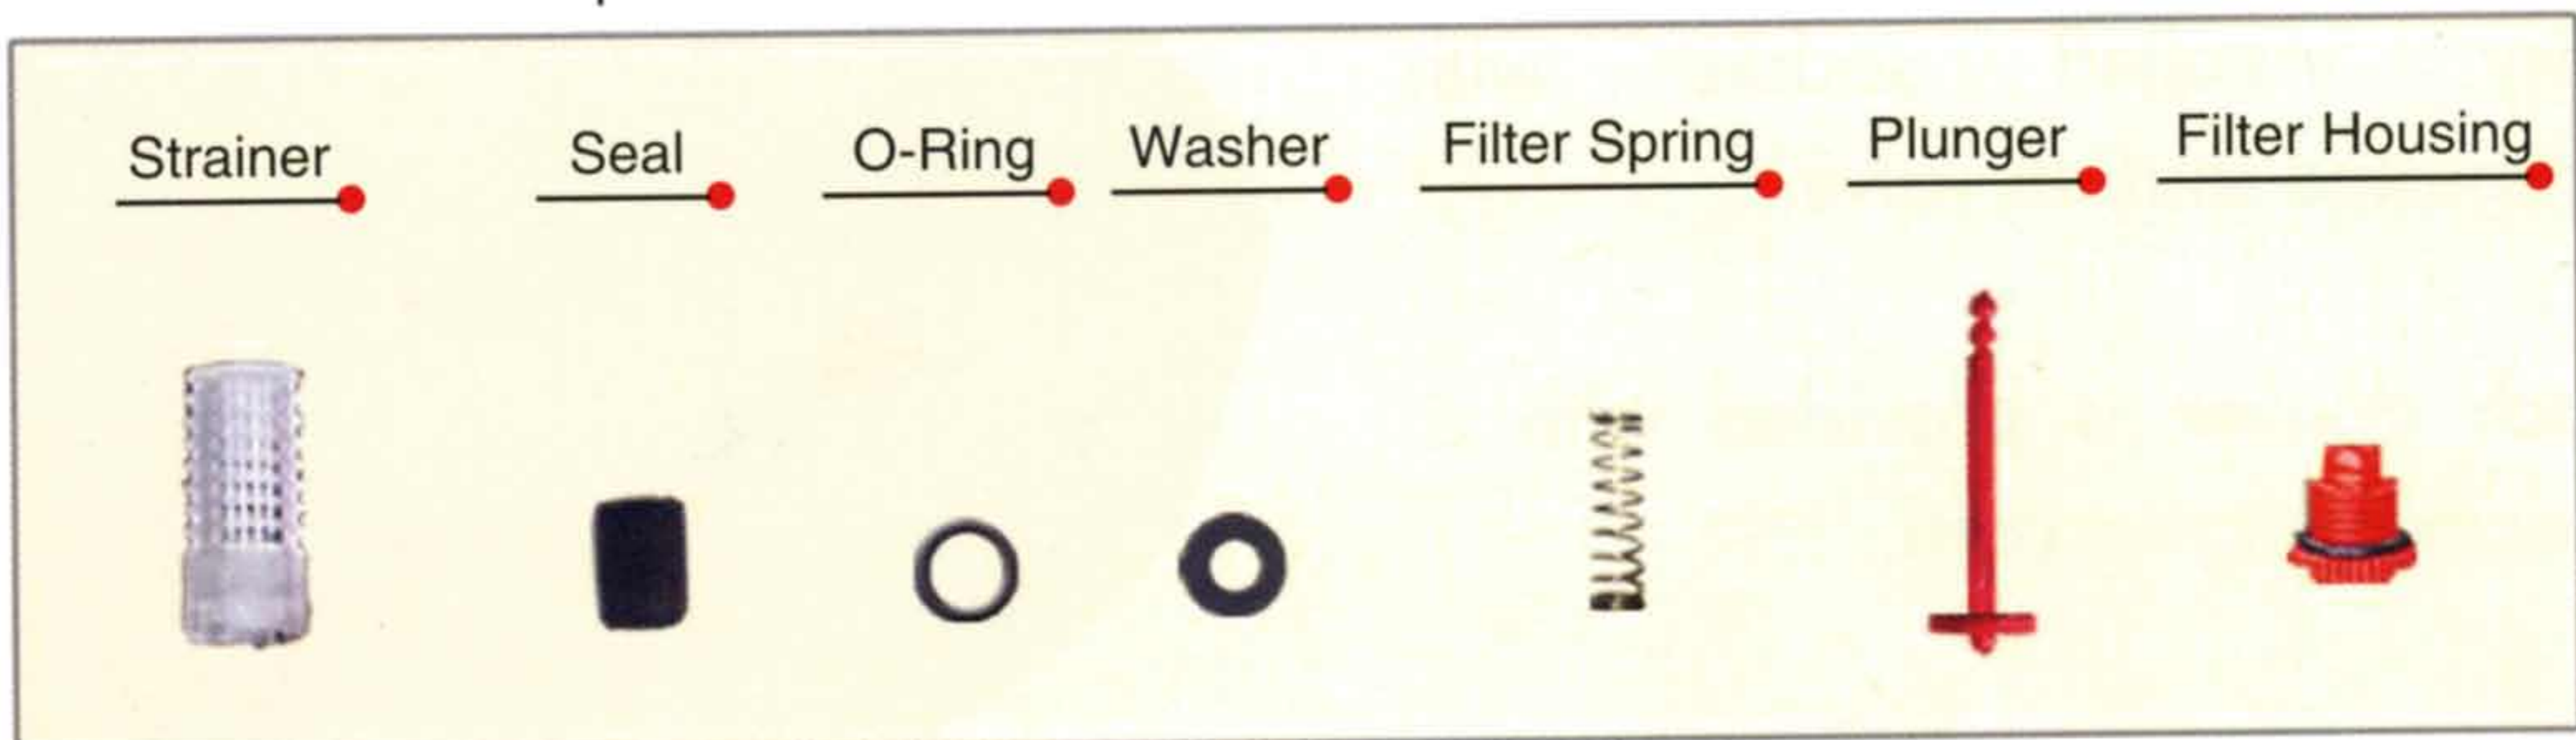

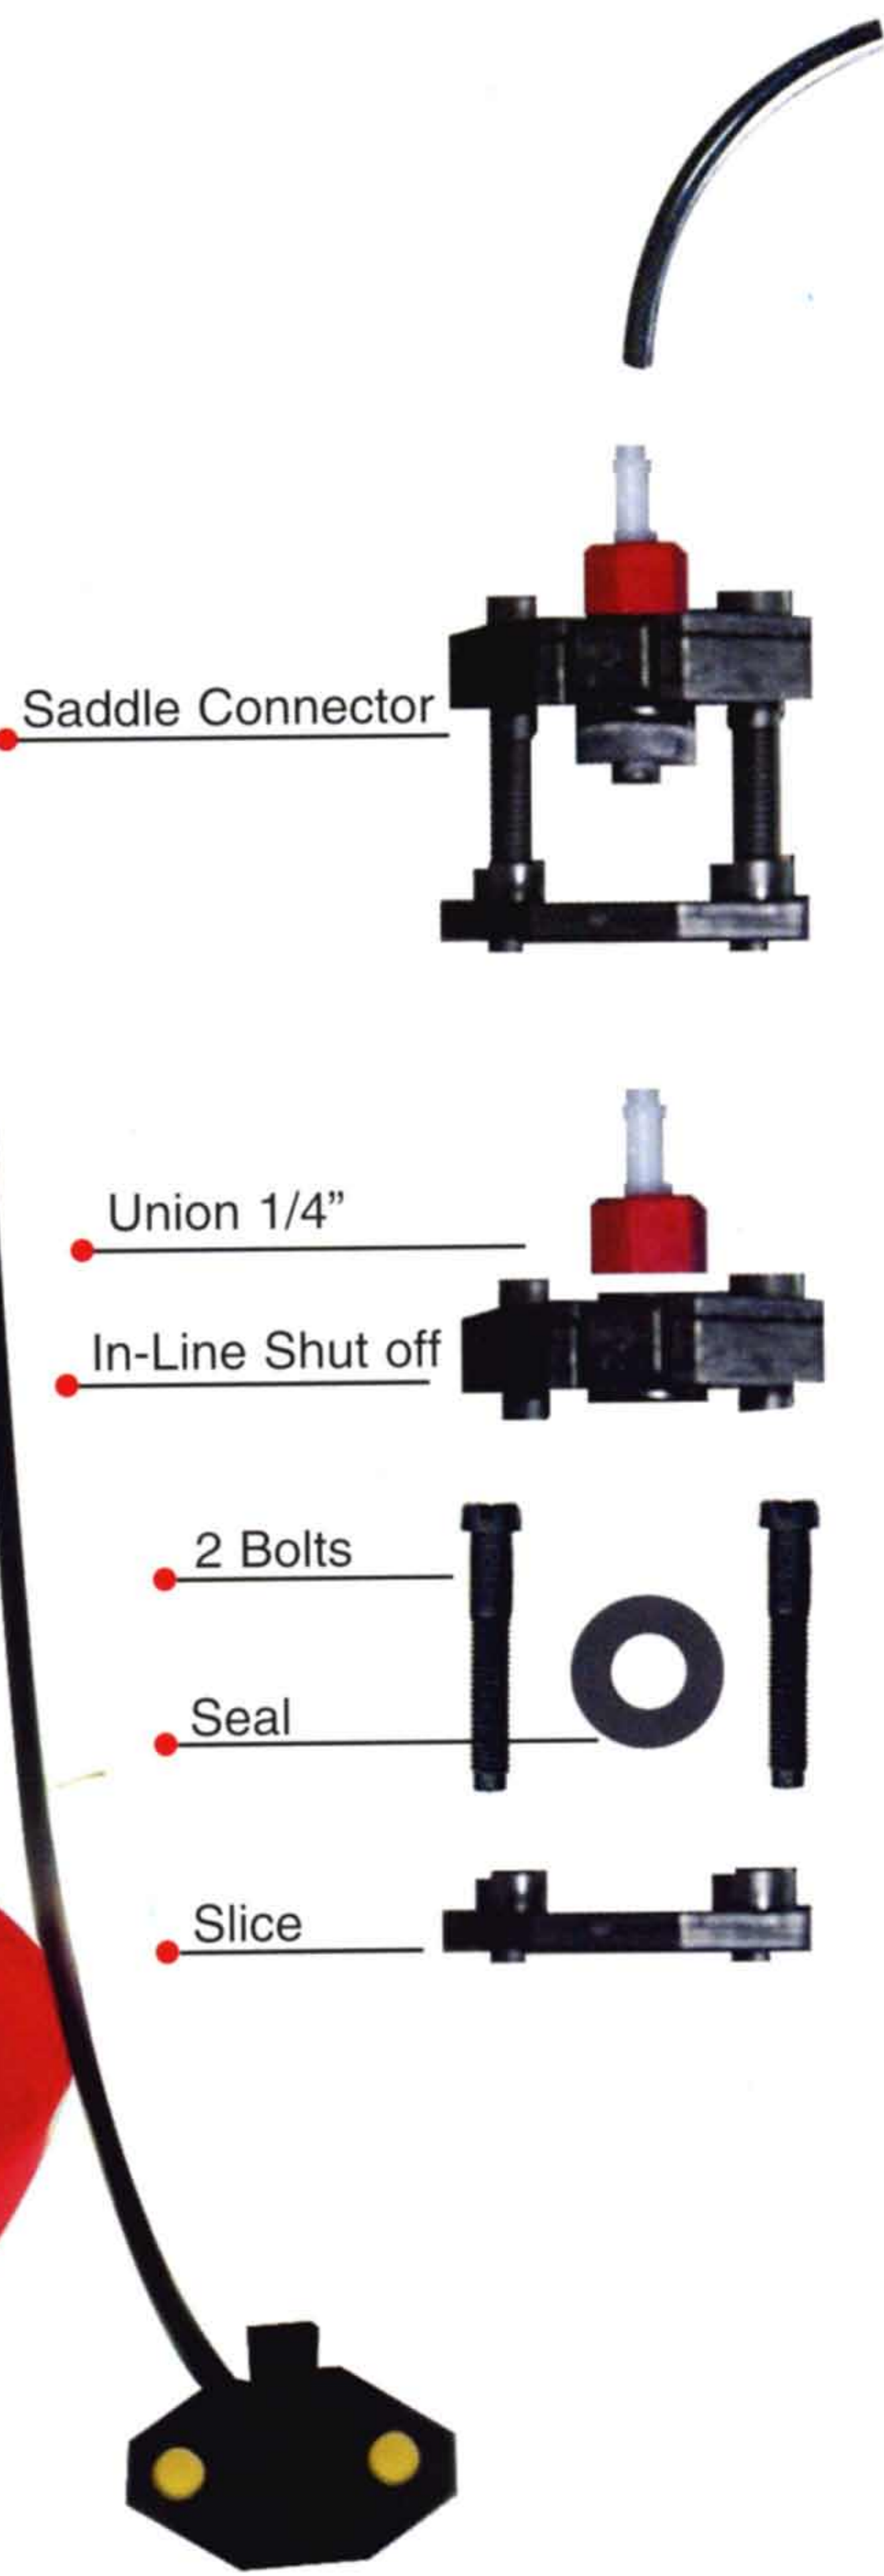

Water is delivered to the drinker through a PVC flexible pipe connected to an easy installed saddle with integrated shut off valve.

Each drinker is provided with a special hanging cord.

The POULTEC BELL DRINKER will assure a hygienic homogenous and continuous water delivery to the birds, with a minimum maintenance effort.
